## Showy milkweed

### *Asclepias speciosa*

- Stem :** 45 to 200 cm tall, velvety or pubescent (hairy).
- Flowers :** pale pink, arranged in umbels. The corona hoods are long (9 to 13 mm) and lance-shaped, making the flowers look like stars.
- Leaves :** opposite, 10 to 25 cm long, smooth or slightly downy.
- Habitat :** well-drained soil, sunny sites, pastures, swamps, forest edges, untilled fields, roadsides, ditches.
- Distribution :** British Columbia, Alberta, Saskatchewan, Manitoba

# Green milkweed

## *Asclepias viridiflora*

- Stem :** 30 to 90 cm tall, pubescent, green and sometimes purplish.
- Flowers :** arranged in often downward-facing umbels, pale green sometimes tinged with violet. Unlike other milkweed species, the flowers of this species have no corona hoods.
- Leaves :** arranged in opposite pairs on the stem. Vary in shape depending on the habitat where the plant is found. They may be long and narrow or broader and oval. The leaf edges may sometimes be wavy.
- Habitat :** dry, sandy or rocky soils, but also in wetter sites like marshes.
- Distribution :** British Columbia, Alberta, Saskatchewan, Manitoba, Ontario
